```

select distinct customer_id, customer_name
from Customers
where customer_id in
(
    select customer_id
    from Orders
    where product_name='A'
) and customer_id in
(
    select customer_id
    from Orders
    where product_name='B'
) and customer_id not in
(
    select customer_id
    from Orders
    where product_name='C'
)
    
```

I would just make it 2 lookups and have one be WHERE product_name = "A" OR product_name = "B"
